

make your station's **heart** **beat**

## Features

- 6 DIFFERENT DATABASES

RadioStar II has 6 different databases such as Songs, Spots, Jingles, Sweepers, Voice Track, Events. Additional there is direct file browser for external files.

- Rebroadcast 3 audio sources and 4 internet stream

Just schedule which one you want to be on air and when. Rebroadcast can be interrupted for commercial breaks.

- Network Rebroadcast Synchronization

Synchronize main with the simulcasting station to play each station its commercial break. Jazler will fill the gap if the break on motherstation is bigger.

- Unlimited workstations

RadioStar can work perfectly in a local environment to provide unlimited workstations to the production, marketing and sales departments.

Jazler RadioStar is the premiere radio automation package developed By Jazler Software

After the release of SimplePack, RadioStar was designed and coded from the scratch, to be able to be expandable over the time. RadioStar has all the features a radio automation package needs, with an easy to use user interface, the least needed menus and buttons to complete a task and automated features to save time. RadioStar can work perfectly in a local network environment to provide unlimited workstations to the production, marketing and sales departments.

- Powerful Music Scheduling
